

The Dompé Suite of Services helps your patients access OXERVATE® and start therapy faster

oxervate®
(cenegermin-bkbj ophthalmic solution) 0.002% (20 mcg/mL)

When prescribing OXERVATE® for your patients, the following options provide your office with support for the next steps in prescription fulfillment, which can include completing a prior authorization (PA), if needed, and enrolling your patients in support programs. Use this guide to help choose the best path to access and support for your practice and patients.

Understanding the Dompé Suite of Services

Prescribing with iAssist vs CoAssist Pharmacy

In addition to traditional fax, Dompé offers 2 options for digital prescription of OXERVATE and enrollment into Dompé CONNECT to Care (DC2C): iAssist and CoAssist Pharmacy. Since both have slightly different requirements, it's important to consider a few things before choosing the right path for your office:

- Consider the preferences of your office:
 - Are electronic medical records/electronic health records (EMRs/EHRs) part of your practice workflow? If yes, CoAssist Pharmacy could be the option for your practice
 - Does your practice have familiarity with digital portals? If yes, iAssist could be the option for your practice
- Confirm what patient information will be needed for prescribing through iAssist or CoAssist Pharmacy

Field Access Managers (FAMs)

The FAM educates practices on DC2C services and provides education on payer trends and changes.

Please ask your Key Account Manager (KAM) for your FAM's contact information.

Patient Access Managers (PAMs)

The PAM monitors patient cases and provides case management support as needed.

Please ask your Key Account Manager (KAM) for your PAM's contact information.

For more information on these platforms and programs, please see next page.

What to consider when prescribing OXERVATE®

CoAssist Pharmacy is an online platform that automates patient access from your practice's existing EMR/EHR systems to prescribe OXERVATE® and enroll eligible patients into Dompé CONNECT to Care.

CoAssist Pharmacy features include:

- Proactive capture of patient consent through text message
- Real-time PA submission with decisions returned in minutes*
- eBenefits Verification (eBV), including if PA is required, in <15 seconds

*PA decisions can be returned in minutes to hours depending on payer/pharmacy benefit manager (PBM) electronic capabilities.

iAssist is an online portal that provides HCPs with a streamlined process to prescribe OXERVATE, submit an electronic PA, and enroll patients in Dompé CONNECT to Care.

iAssist can help you:

- Capture all patient enrollments from your practice in one platform and dashboard
- Reduce PA turnaround times by uploading patient insurance cards, medical history, and letters of necessity when on the iAssist platform
- Digitally capture patient consent and prescriber signature
- Access benefit verifications and patient financial assistance programs where appropriate

Dompé CONNECT to Care is a practice and patient support program that can assist with insurance verification, patient financial assistance, PA, and more all through a single point of contact.

Dompé CONNECT to Care helps with:

- Program enrollment
- Benefits verifications, assist with PAs, and appeals resources
- A copay card for commercially insured patients, referrals to other financial resources, and patient assistance for eligible uninsured or underinsured patients
